

11th Annual Biologics Formulation Development and Drug Delivery

April 6, 2020 by BiopharmaTrend

This **marcus evans** industry-working group will feature many of the ongoing constraints that are faced during the formulation development of biologics and the selection and development of drug delivery systems. From protein characterisation to QbD practices and manufacturing processes, this event will enable you to grasp the latest research, learn about novel innovative delivery platforms and be part of highly interactive discussions. Experts in the field from Big Pharma companies, Research Institutes and successful Biotech companies will lead this engaging upcoming event. We will foster stimulating conversations by creating a platform to discuss high-concentrated formulations, challenges with excipient interactions, liquid and powder formulations, several delivery systems or the feasibility of oral biologics.

This annual event will feature manifold topics; we will be discussing the feasibility of novel delivery systems, the advances for the next generation of biologics, the use of nanoparticles for different purposes, a toolbox for a robust formulation process and how to master fill-finish manufacturing.

Can't physically attend this conference? Take advantage of our online live stream of the event, enabling you to attend all event presentations remotely or on-demand at a time that suits you.

In addition to the live stream, all presentations and additional event content will be available on demand post event through our digital platform for you to revisit over the next 6 months.

Readers/members are entitled to a discount for registering (valid only for end users). For more information, please contact Constandinos Vinall at constandinosv@marcusevanscy.com

Details

Start: June 15

End: June 17
